

PassGen for Java Release 6 release notes

Before installing new release

Please back up you any Keystore files and the license file (license.dat) you are using before upgrade.

Changes in release 6

- Support for Java 9 and greater
- REST application to allow applications to generate credentials using HTTP requests.

Problems fixed

None

PassGen REST application

The REST application is built using Spring Boot and is a fully self-contained application in a JAR. This requires Java 8 or greater.

Users no longer have to have knowledge to the PassGen API to request services, they can make a request directly to a REST API using OAUTH2 Javascript Web Token for authentication.

This application can operate in any operating system with a suitable JRE.
